Exam Options

Advanced Eye Care, Tailored to You.

Your eyesight is precious - and modern diagnostic technology allows us to protect it better than ever. At Dipple & Conway, we offer three levels of clinical examination, each combining expert optometry with the latest imaging equipment.

Our enhanced, premium and extended options provide increasing levels of detail, including 3D retinal analysis,  **optos**® ultra wide-angle scanning and longer consultation time. Your optometrist will recommend the level most suited to your individual needs.

These tiers enable early detection and effective management of eye conditions, offering clarity, confidence and complete peace of mind.

GOLD-STANDARD IMAGING

Our Premium Enhanced and Extended examinations use a powerful combination of OCT and  **optos**® ultra-widefield imaging, the same gold-standard technology trusted in leading eye hospitals. This gives us an unparalleled view of your retina and allows for the earliest possible detection of eye conditions.

45 minute
appointment

Enhanced
